

# Testing Report

22424830

August 13, 2026

## 1 Test Strategy

Backend unit/integration tests were used to validate the ticketing and check-in logic. The concurrency test is the highest-risk requirement.

## 2 Results

| Test                          | Expected                       | Result |
|-------------------------------|--------------------------------|--------|
| Unique ticket code generation | Valid format                   | Pass   |
| Valid check-in                | HTTP 200                       | Pass   |
| Duplicate check-in            | HTTP 409                       | Pass   |
| Unknown code                  | HTTP 404                       | Pass   |
| Concurrent check-in           | One success,<br>four conflicts | Pass   |
| Duplicate attendee email      | HTTP 409                       | Pass   |

## 3 Validation

Backend tests and frontend build verification were executed successfully in the local environment.
